# War must continue until all Hamas tunnels are destroyed

written by Meir Ben Shabbat | 12.01.2024

It would be a daunting challenge to map a realistic vision for the Gaza Strip for the coming decade or even, in most likelihood, farther down the road. One will have to choose between a hopeless vision and baseless hope. In formulating its positions regarding the day after, Israel's civilian leaders will need to adopt a realistic approach, adhering to the hard facts and data about the monstrous entity that has grown in our midst, taking deep root in all systems of life and segments of the population in the area it controls.

It will have to operate on the assumption that it is impossible to effect real change on a profound and cultural level there, at least for our generation. It will be required to set demilitarization as a threshold condition for any future modus vivendi in Gaza, to oppose any initiative or move that would jeopardize this, and not to trust foreign peacekeeping mechanisms.

The upcoming visit to Israel by US Secretary of State Antony Blinken provides an opportunity to set expectations with the US administration on this matter too. While the discourse on the "day after" issue has focused on the question of "who will be" in charge the day after a Hamas regime collapse, no less important is the question of what will be the reality on the ground. In public, Israel's answer to these questions has been in a negation - emphasizing what will NOT be in the strip: no to a Hamas regime, no to a Palestinian Authority in power there, no to military capabilities threatening Israel, no to restrictions on that would hamper its freedom of action. Israel's leaders have put forth a general framework but did not flesh it up with details.

Despite criticism of this, the government has been acting properly in postponing any real deliberations on the details. This was designed primarily to keep attention focused on the fighting, but also so as not to create an impression of Israel being in a hurry and already preparing for the conclusion of the campaign

(thereby weakening our forces and bolstering the enemy's hopes). A third reason is to avoid having this issue dividing the public, and a fourth reason is to delay and reduce political friction on this issue with the Biden administration. Finally, another reason for this dithering was the realization that creating the "day after" depends on the achievements of the ongoing combat, and it is best to have that discussion from a position of strength, when one holds assets and leverage, not before.

Although the IDF operation is still in full swing, it is worthwhile to deviate from this line and delve now into one of the characteristics of the "day after," precisely because deliberating this issue provides an answer to one of the tough dilemmas at this stage of the fighting: coping with the tunnel challenge.

On the one hand, after the price it paid on October 7, Israel cannot allow the monstrous tunnel network and its additional elements to exist in the Gaza Strip. On the other hand, the price Israel is already paying to expose and destroy this network is high. Continuing the systematic effort to uncover tunnels will prolong fighting, exact further costs on our forces, and also increase political pressure on Israel. What should be done, then?

Any area with tunnels will be declared a battle zone for an indefinite period. First, it must be made clear that as long as tunnels exist – the state of war will continue! Israel should seek consensus (especially by having the US on board) on the idea that the existence of tunnels in the strip violates the principle of demilitarization and that the Palestinian residents will not be able to live their lives in areas with tunnels. This means that these areas will be defined as "combat zones," and anyone found in them will be considered an enemy combatant and treated as such until the area is tunnel-free.

Opponents of this idea will likely point out that solutions must be found for the population. In a different reality, given Gaza's conduct as a " Hamas state " and in light of the high levels of support for that organization and its brutal attack on Israel among Gazans, there would be no room for this question at all.

However, given prevailing attitudes today in the world, it can be assumed that ignoring the plea of the population would only increase opposition to Israel's plans. Thus, Israel must enlist the US to help provide humanitarian solutions that would be defined as lengthy but not permanent. These will be outside the area of

combat.

Another argument to support such an approach is the state of destruction in most Gaza neighborhoods. Most of the population has nowhere to return to anyway. Anyone who sees Hamas' tunnel enterprise - which relied on construction materials intended for civilian purposes - should also lower expectations for rebuilding and rehabilitation in the foreseeable future. Israel cannot afford to let such diversion of construction material happen again.

# **The Gaza war is only a part of Iran's grand plan**

written by Joseph Rozen | 12.01.2024

During a UN Security Council meeting on the 24th of October, the secretary general, Antonio Guterres, said that Hamas' October 7th attacks on Israel "did not happen in a vacuum". He was not wrong - Hamas' attacks were planned and executed with the close assistance of Iran, which continues to arm, guide, finance, and activate its proxies in the Middle East.

The Israel-Gaza war has repercussions on the international fight against Iran and its other accomplices. Hezbollah in Lebanon, the Houthis in Yemen, and Shia militias in Syria, Iraq, and recently in Sudan, are all Iranian agents of chaos and terror, who serve Iran's interests - to create a Shia-dominate strip stretching from Iran to the Mediterranean Sea to shift the leadership of the Muslim world from Sunni countries to Iran, end the US presence in the Middle East and destroy Israel. Besides Iranian direct support, the use of these proxies would not have been effective without an envelope-supporting system of private entities, with the ability to enable money transfers, technologies, communications, etc.

The current situation in the Middle East provides an opportunity to increase global efforts to stop Iran's malign behavior, not only by sanctioning Iran and its proxies but also use complementary measures to sanctions and target private

companies which assist Iran in executing terror activities.

## **The Military Sphere**

After the fog of October 7th atrocities faded away, the Israeli defense forces were able to recover Iranian-produced weapons used by Hamas during the October 7th attack. The Foundation For Defense of Democracies (FDD) reported that 60mm mortar rounds with Iranian-made AZ111 mortar round fuses and M112 demolition charges were used by Hamas in the attack. Evidence shows that these components were produced in Iran and appear in a catalogue of the Defense Industries organization, an Iranian company that is affiliated with the Ministry of Defense of Iran. The M112 explosives recovered were identical to those intercepted by US-led operations in Yemen and Bahrain to stop smugglers.

In addition to these familiar weapons, the IDF has also recovered new Iranian-made warheads for Rocket-propelled grenade launchers (RPG) that were not seen before. In the new warhead, the first charge is designed to penetrate light armoured vehicles and the second charge is thermobaric, aimed at burning the target.

The latest launching of drones and cruise missiles by the Houthis in Yemen towards Israel demonstrated more Iranian weapons variety. Since November last year, the US Navy seized many weapons and munitions en route to Yemen, in the area of the Red Sea and Gulf of Aden. These included explosives, ammunition, weapons and missiles, which are in the use of Hamas and other proxies as well.

Iran's creativity goes as far as its cruelty in its efforts to maintain a flow of arms to Iranian proxies in the region. Following the devastating earthquakes that hit Syria in February 2023, the IRGC used humanitarian assistance as camouflage to transfer weapons and crucial components to assist with Hezbollah's efforts to turn their rockets more accurate. Recently, Syria accused Israel of launching simultaneous missile attacks against its airports, probably to stop the already known route of weapons transfer from Iran to Syria and further to Hezbollah. After the destruction of these airports, Russia hurried to allow Iranian flights to use the "Khmeimim" air base in Syria. This is happening while Hezbollah and Shia militias in Syria have been targeting Israel with rockets since October 7th.

## **The technological efforts**

Alongside supplying weapons to terrorist organizations, Iran is also very active in the technological sphere, which is crucial for securing funds for terrorism, surveillance, and supporting other terror-related activities inside and outside Iran.

ArianTel, an Iranian wireless communications services provider was pivotal to Iran's efforts to create a large-scale surveillance network. According to Citizen Lab, a cybersecurity NGO based in Canada, the surveillance and censorship capabilities resulting from this level of integration with mobile service providers cannot be understated.

Prime example for this is MTN Group. MTN entered the Iranian telecom sector in 2005 and launched its services in Iran a year later using a subsidiary named Irancell, a front company of the IRGC, in which MTN owns a 49% stake, the other 51% owned by the Iranian Electronic Development Company. Since then, MTN has been closely involved with ArianTel, as part of its joint venture with the Iranian government. MTN and Irancell, provided multiple Access Points and Roaming agreements, granting ArianTel explicit access to their cellular networks. This allowed ArianTel and the Iranian government to carry out surveillance operations on dissidents and critics within Iran.

MTN group openly and knowingly conducted business with the IRGC and ArianTel despite international sanctions against them. In April 2023, ArianTel was sanctioned by the European Union, for contributing to the telecommunications surveillance architecture mapped out by the Iranian government to quash dissent and critical voices in Iran. In 2020, a year after IRGC was officially designated as a foreign terrorist organization (FTO) MTN released a statement saying that it would continue its business as usual.

MTN made conscious decisions to engage in misconduct while violating sanctions, and effectively supporting and facilitating Iran's terrorism. But the use of telecommunication systems does not stop at surveillance and suppressing dissent at home, rather it is used to advance Tehran's international aspirations as well, supporting Iran's proxies in Syria, Iraq, Lebanon, Gaza, and Yemen.

This activity is at the core of the US district court in New York's high-stakes anti-terrorism act lawsuit against MTN Group. In addition to its direct engagement with the IRGC, the lawsuit revealed the group's violations of the Anti-Terrorism

Act by paying protection money of more than \$100M to al-Qaeda and the Taliban so they wouldn't target its cellular towers, and they deactivated the towers at night, preventing US intelligence operations.

Another dimension of concern is MTN's decades-long association with Hezbollah, a designated terrorist organization and a proxy of Iran. This relationship involved providing equipment that Hezbollah used as detonators and for tracking their adversaries. This history of supporting and enabling terror activity might indicate that other proxies of Iran, such as Hamas were also benefiting from MTN's services.

There is evidence that Hamas' brutal attacks against Israel, were accompanied by cyberattacks conducted by a group linked to Iran. The attacks were aimed at stealing, publishing, and deleting sensitive information such as personal data and intellectual property from educational institutions and tech companies. These attacks began in January 2023 but were intensified following the October 7th attacks.

NYT reported that Iranian hackers were waging an espionage campaign targeting rivals across the Middle East, including Israel, Saudi Arabia, and Jordan. The cyberattacks are linked to Iran's Ministry of Intelligence. According to Israeli cybersecurity officials, 15 groups of hackers, such as "agonizing serpents" and "LionTail", affiliated directly or as a proxy, with the IRGC and Iranian Ministry of Intelligence, are responsible for the attacks. During this campaign, there were also attempts by groups affiliated with Hamas and Hezbollah to hack CCTV cameras in Israel.

## **It's time to stop Iran**

As shown above, Iran's terror network is broad, and it also serves as a distraction from its efforts to cross the nuclear threshold and reach a nuclear military capability. Following Iran's involvement in Hamas' attacks against Israel and the continuous support of other proxies in the Middle East, the international community must step up joint efforts to stop both Iran and its accomplices.

The most common measure against Iran is sanctions, mainly in relation to the nuclear program. While sanctions took a toll on Iran's economy, the shadow financial network provided it a lifeline. This year, the US imposed new and broader sanctions on a "shadow banking" network of 39 entities across multiple

jurisdictions, including those registered in China, Türkiye, and UAE. These sanctions are targeting Iranian front companies abroad that have generated tens of billions of dollars for the Iranian regime.

One of Iran's ways to bypass sanctions is the use of cryptocurrencies, which Tehran legalized in 2019. Around 4.5% of global bitcoin mining is done in Iran. International compliance regulations, including those issued by the FATF (Financial Action Task Force), have made it more difficult to use cryptocurrencies as a way to evade sanctions but did not entirely stop Iran.

In addition, the US decided to freeze \$6 billion that was part of a prisoner swap deal with Iran to free 5 American citizens. Due to Iran's backing of Hamas, the US reached an understanding with Qatar to prevent access of Iran to the funds. The US also imposed new sanctions on Hamas and members of IRGC for arming, training, and providing financial assistance to the terror organization. The US Department of Treasury emphasizes Iran's role in providing financial, logistical, and operational support to Hamas.

The EU announced that it is considering imposing similar sanctions against Iran over its support of Hamas. Moreover, the big three European countries refused to lift sanctions on Iran after the 18th of October 2023, a date set by the original deal in 2015 and relates to missile capabilities of Iran.

Although there is still some pressure on Iran, the effectiveness of sanctions is debatable. The Iranian leadership is very flexible in its ways to evade sanctions, leaving the Iranians to suffer as a result of the sanctions, especially when these are focusing on financing channels. Yes, the economy plunged but that did not change the behavior and ambitions of the Iranian regime.

The current situation in the Middle East generates an opportunity and momentum to act now against Iran. This should include complementary means to sanctions, such as cyber tools, a direct credible military threat to Iran's strategic infrastructure, and dismantle of its proxies. But also, the targeting of target channels of technology transfer and financial support with direct links to IRGC. In this context, the lawsuit against MTN Group is an important step. The Iranian leadership and its accomplices must know that as long as they engage in terrorism and nuclear armament, the international community will react vigorously.

# **Generous humanitarian aid will only prolong the war**

written by Meir Ben Shabbat | 12.01.2024

It might be appropriate to adopt a more aggressive approach so as to reduce the risks to our forces, even if it runs against the wishes expressed by the White House
